

# CAIS 117: Intro to Programming with Python

Fall 2023

---

## Code For Good Activity 3: Self Exploration

### **Learning Objectives:**

- Consider your own values for programming

### *Part 1*

We've discussed how technology can be leveraged for good in society several times throughout the semester. For this last activity of the class, it's your turn to see how programming connects to an area of interest and importance to you.

What is an area about which you are passionate? Spend 10 minutes looking for an example of programming being used to benefit that area. Once you have your example, generate a 3-5 minute presentation that showcases what you found. Your presentation should:

- Explain the area you chose
- Highlight the example of how programming benefits that area
- Explain (at a high-level) how you would use programming to benefit your area of interest

Neatly write up the points required for your presentation and submit your write up on PLATO.

For the final 30 minutes of class we will hear presentations.

### *Submission*

Save your document as a PDF and submit it on PLATO.
